

Diving with the Yemaya II in Columbia's

Malpelo Island

Text and photos by
Wolfgang Pölzer

Good size scorpionfish hiding from the strong current. PREVIOUS PAGE: You can even find some spots with colorful coral life on Malpelo

Three of world's best shark spots are located far off the coast of Central and South American, in the eastern Pacific Ocean. The least known of them, the tiny Colombian island of Malpelo, together with Galapagos and Cocos, create a "golden triangle" for big fish fans.

The current tugged at our fins. Severe threshold enables us to the rhythm of the long-drawn swell incessantly a few meters to the front and back. We had long since become accustomed to the incessant beeping of the dive computer display, which did not recognize the rapid changes in pressure. Even here,

a good 20 meters down, the forces of nature had no doubt who was the strongest.

Swarms of doctor-, handle- and butterflyfish could be on anything of it and seemed to dance around us effortlessly. Moray eels, with bodies as thick as a person's arms, were not peering out of their residential holes with only their heads as one usually finds them, but meandered out in the open virtually defenseless between the sparsely colonized rocks. Mostly flat, sharp barnacles were growing on the outcroppings; beautiful pink-colored coralline algae covered the jagged volcanic rock.

A dark gap yawned before us. Not quite three meters wide, but certainly more than ten feet tall, we were lured into the pitch black rock. Startled by

our headlights, a handsome whitetip reef shark peered at us in the distance. Shortly after, we were blocked by a wall of Blaustreifenschnappern in the way. They seemed reluctant to give us room to pass.

Behind the school of fish, a deep blue shadow loomed. The slot-shaped cavity turned out to be about a 20-meter-long tunnel. Shortly before starting their impressive romp, Dickkopf mackerel made their sickle-shaped fins; they were incredibly quick and agile. During the slow ascent to the surface, we were honored by a squad of eagle rays. The graceful animals soared in formation far below us on the barren rocky reef.

After leaving the reef behind, it seemed a long time after we shot our surface marker buoy to notify the dive boat to come to us that they finally

School of snappers at the dive site Cathedral

noticed us. There was extremely great danger in being abandoned, unnoticed out here. Being a good 500 kilometers from the Colombian coast and far away from any shipping routes was really uncomfortable. After a few minutes, neither substrate nor reef could be seen.

An invisible current came at us through the eastern Pacific. At a depth of around five meters, the sea suddenly turned dark ahead of us. Had the current taken us back to the rocks? No, it was a gigantic wall of jacks coming towards us -- the biggest school I have ever seen. Thousands of silvery fish bodies orbited around us, enveloped us, obstructing the view between buddies. We enjoyed the feeling of being part of the swarm for a few minutes. But just as suddenly as it started, the

CLOCKWISE FROM TOP LEFT: Jackfish and grouper hunting in front of a cave; The few corals are either hard and tiny or soft and very flexible to endure the strong currents; Resting grouper; Moray eels are very common at Malpelo and almost always out in the open and swimming freely

MV YEMAYA II

YEAR: 1965. Originally built as a supply ship for oil platforms, then a private yacht, floating casino and escort vessel for deep sea fishing. Finally, in 2008 completely renovated and converted into a dive boat.

CREW: Seven-man crew plus two dive guides

LENGTH: 35 feet

SHIP TYPE: Steel ship motor yacht.

ENGINE: 1,300 hp diesel

CABINS: Two double cabins including bath / WC, four double cabins with private sink but shared shower / toilet for two adjoining rooms, as well as two large master cabins. Maximum occupancy is 16 guests. All cabins with individually controlled air-conditioning is not.

FACILITIES: Ample space, upper deck with covered dining tables, lounge and sun deck. Spacious dive deck with lights and camera charger (110V), air shower, two sinks and two showers. Air-conditioned lounge with flat screen TV and DVD player in the lower deck.

Two sturdy eight-meter fiberglass dinghy with 2x2 110 or 140 hp for 12 divers.

Two Air and Nitrox membrane compressor 1, 2 and 3 Water power generators.

ELECTRICITY: 24 hours 110 V, American flat plug (adapter needed) in each cabin, 220 V only in the engine room.

Giant school of jackfish (above); Tiny little corals blooming in the current (right)

swarm was gone. Visibility cleared as the mackerel left us to move with the current.

The otherwise empty desert-like blue sea, however, had another surprise in store for us. About two dozen tuna plowed past us. Their interest in us seemed extremely low. After a few seconds, we had the open ocean back to ourselves. But not for long.

First, only a shadow could be seen on the edge of our vision. I had a little more than a hunch, a hope. Yes, it was a shark. One, no two, no, a whole group! And then the numbers increased very quickly. Out of nowhere, the sharks suddenly appeared everywhere.

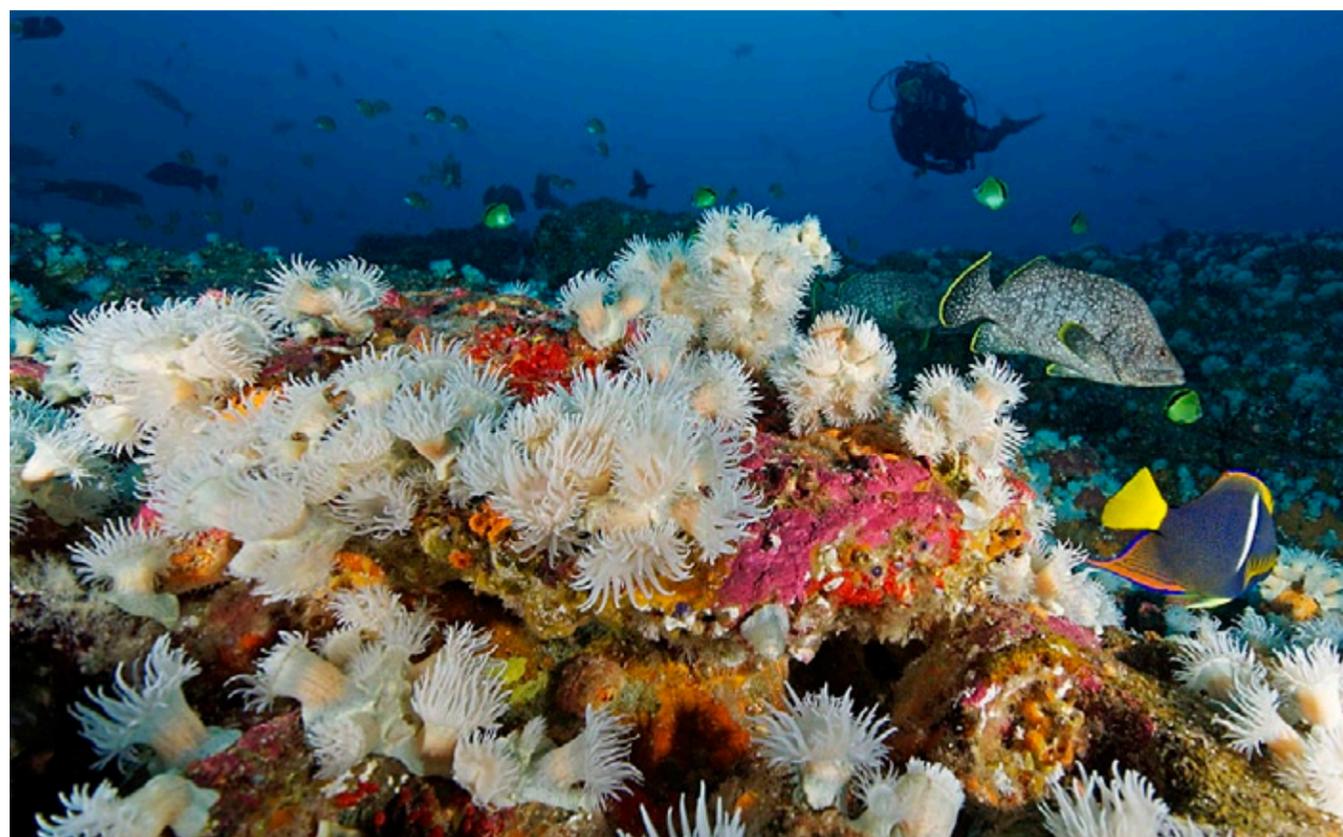

During the entire dive, we had hoped, feared that this would happen. Now, it had come true. We were surrounded by a vast amount of about

two-meter-long silky sharks! The lean, slightly golden, shimmering predators circled us, swam among us, enveloped us.

Their numbers were difficult to estimate; it was impossible to count them. Who knew how many were still out of sight? With over a hundred schools—some say even up to a thousand—these clusters of silky sharks are found only here at Malpelo and are unique in the world.

The animals seemed curious but not aggressive. Most did not come closer than five meters; some were brave and came within about two meters.

When others approached, they differed simply in their depth. Unfortunately, our air supply dwindled, as did the sharks, and all the schools of fish slowly lost their interest in us. We began our ascent.

MV YEMAYA II

VESSEL OWNER: Otmar Hanser, German, of Panama

EDUCATION: Only PADI nitrox (US\$170)

LANGUAGES: English, German, Spanish

DIVING REGULATIONS: Provides certification, log book and final medical confirmation. Minimum

QUALIFICATIONS: AOWD and 30 dives. We dive for safety on Malpelo (flow) only in groups.

MAXIMUM GROUP SIZE: 8 divers per guide.

MAXIMUM DEPTH: 40 meters.

REQUIRED SAFETY EQUIPMENT at the greatest possible buoy (preferably with 20-meter reel), a whistle and a small mirror. For every free diver is a transmitter of the GPS and radio-tracking system "Nautilus Lifeline" is available.

NATIONAL PARK FEES: Coiba: \$20 pr person pr trip Malpelo: \$85 pr person pr day Cocos: \$35 pr person pr day

NITROX 32% SURCHARGE: \$100 pr person per entire tour

SAFARI TOURS: Year-round 6-15 day tours mainly to Coiba and Malpelo. A few events per year to Cocos.

DECOMPRESSION CHAMBER: Panama City

Just below the surface, we saw an arrow-shaped something shoot toward us, stop about three feet away, turn and disappear just as quickly. We saw just enough to realize that our brief visitor was a marlin. What a dive!

Features of Malpelo

The tiny islands of Malpelo are located about 650 kilometers southeast of Cocos and around 1,200 kilometers northeast of Galapagos in the eastern Pacific. Malpelo is nothing more than the top of a huge undersea mountain range. The island's banks fall into the sea to a depth of about 4,000 meters. Up to eight different ocean currents meet here during the year, all of which bring nutrient-rich deep water, and explain the high volume of large fish.

Around the main island, about 300 meters high, are assembled a dozen small rugged crags; almost all their submerged cliffs and rocky slopes harbor excellent diving spots.

Local fauna include two endemic species of lizards, which thrive here almost exclusively,

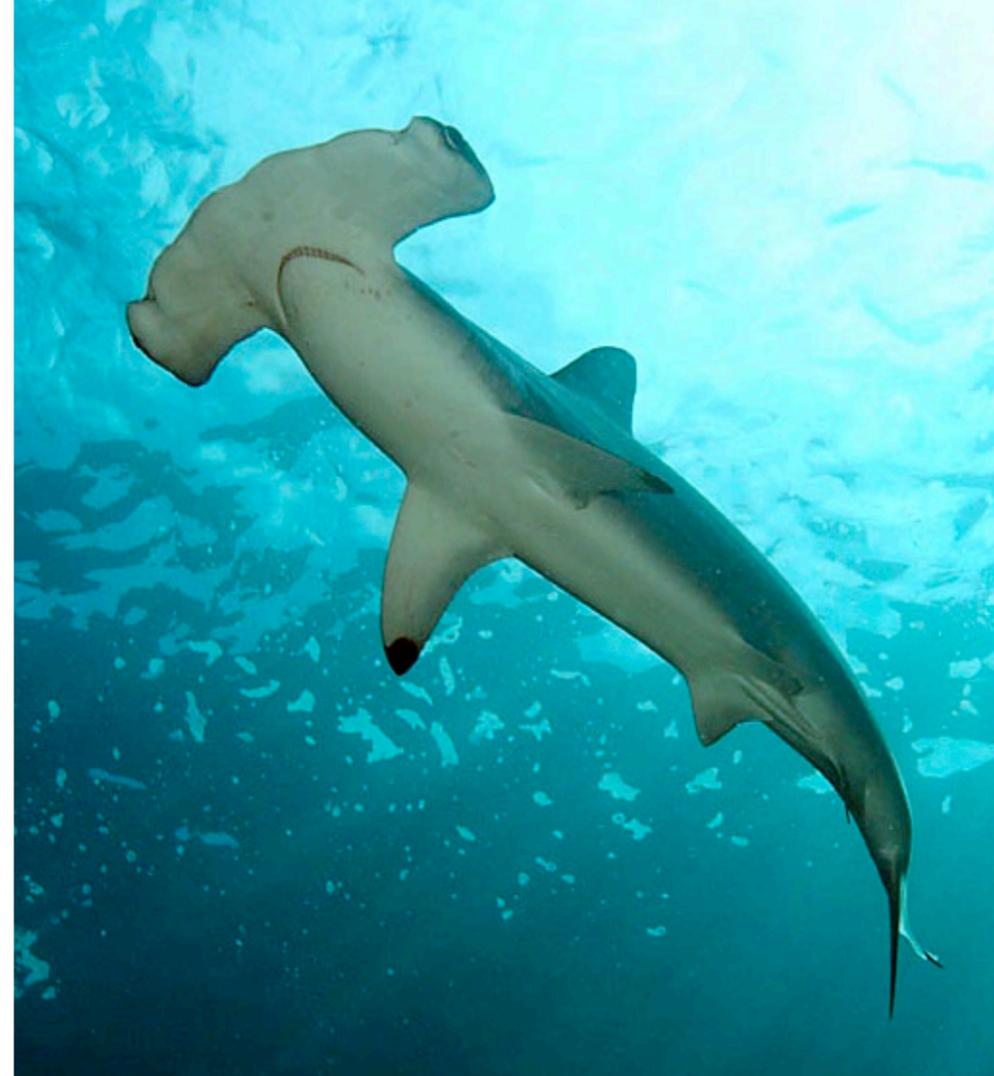

as well as terns, gulls, frigate birds and masked boobies. The latter boast a population of nearly 30,000, and are the second largest colony of masked boobies in the world. Important to us divers, however, are the sharks of which there are still enough living around the small island group.

Sharks, sharks and more sharks...

In addition to the aforementioned silky sharks, there are huge schools of scalloped hammerhead sharks, Galapagos sharks, whitetip reef sharks, whale sharks and the rare shield tooth sharks (*Odontaspis ferox* or smalltooth sand tiger shark) which can be encountered only at depths below 50 meters.

Fortunately, the region was formally made into a protected marine reserve in 1995, and in 2006, got on the list of UNESCO World Heritage Sites. Far from the mainland coast and surrounded by legal and illegal international fishing fleets, it is

CLOCKWISE FROM TOP LEFT: Scorpionfish; Grouper getting cleaned by butterflyfish; Giant hawkfish; Sunset at the island of Malpelo

Hammerhead shark (left)

Malpelo

If you are lucky, you can see a school of up to 200 silky sharks! The only spot on Earth where this has been seen before (far left)

MV YEMAYA II

FEATURES: mainly 12 liters and 3 liters piece 15 DIN / INT aluminum tanks—no adapter required. There are six rental equipment available on board—those who arrive without their own equipment, however, should pre-order rental equipment.

PRICE EXAMPLE: 9 nights on board (one dive Coiba and 5 days diving Malpelo), including 3 to 4 dives per day, VP, water, soft drinks, tea, coffee, snacks, round trip transfer to Panama City from US\$3,600, plus National Park fee (1 \$20 x 5 x 85 Coiba and Malpelo) = \$445 plus transfer airport/hotel/airport: \$35 Total: \$4,080.

FUEL SURCHARGE of \$100 is added if the oil price (Brent) of \$100 per barrel. A barrel of oil costs about \$120 will be charged a surcharge of \$160.

WEBSITE:
www.coibadiveexpeditions.com

PROS:

- Unique dive sites
- Stable and comfortable boat
- Excellent food
- Nitrox 32 additional charge
- Nautilus free Lifeline radio per diver

CONS:

- Long, arduous arrival
- Only suitable for seaworthy, advanced divers
- High cost of Malpelo National Park (USD\$85/day)

Whitetip reefsharks are not so common, like on Cocos Island

the major fish stocks that need to be protected at all cost. Located on the barren main island, a small Colombian military unit is stationed, which in recent years has acted on several occasions as an armed force against illegal long-line fishing. In addition, the few dive boats operating locally offer the sharks a little bit of protection, as the divers are vigilant and report to the base any ship that appears in the reserve. Unfortunately, they are not always equipped with a patrol boat.

One must be aware that the exclusiveness of the diving here is due to the low traffic of dive boats -- there are just five dive boats that have permission to operate in Malpelo. However, they are not allowed to operate simultaneously but sequentially.

Because of this rule, only one dive boat at a time is allowed to anchor at permanent buoys.

Of course, not everyone is so spectacular dive from Malpelo as described above, but in fact has just taken place without any exaggeration! On the agenda are meetings with the various schools of fish, groups of grouper, eagle rays, and also almost always on nearly every dive, hammerhead sharks. These range the seas mostly in large schools of up to a hundred animals and head directly to the many cleaning stations on the reef where they can get the full treatment from cleaner fish and shrimp.

Diving

When diving the seas around Malpelo, protective gloves are

recommended. Because you will want to see hammerhead sharks and it is not comfortable just floating through the reef, you will want to cling onto current-protected rocks covered with barnacles that have sharp edges. Furthermore, a large surface marker buoy is recommended, along with a 20-meter-long duty reel, if possible. A strong current breaks away from the reef, so there is a need to be able to have at depth a buoy shot immediately to the surface to mark your location. Diving here can be tedious and is certainly not for beginners, but diligent divers are often rewarded with unusual sightings.

The crossing from Panama to Malpelo takes a whopping 30 hours, and the Pacific Ocean is certainly not known to be

as still as a glassy lake. It is thus only recommended for die-hard divers -- at least bring your seasickness tablets in your pack. Since the tour is usually combined with Coiba, the first stage after eight hours of driving is done.

Travel only about 20 miles off Panama's coastal island group, and the area is still completely unknown. During the last Ice Age, the 27,000-square-kilometer archipelago of 38 islands was still connected to the mainland. The huge main island of Coiba is often referred to as the world's largest uninhabited tropical coral island and definitely has the largest coral reef of the eastern Pacific.

The diversity of the national park and UNESCO World Heritage Site is enormous both above and below the water. It boasts untouched tropical rain forests with a lot of endemic species such as unique

howler monkeys, opossums and white-tailed deer, but also crocodiles and numerous bird species, plus miles of snow-white sand beaches and river systems that can be explored by kayak.

There are about 30 dive sites in the park, which promise sensational encounters with schools of mobulas, cow-nosed rays, huge schools of fish, but also frogfish, sharks and turtles. In fact, whale sharks have been seen more frequently between Coiba and Malpelo than before. Another highlight is that

over 1,000 humpback whales come here to give birth and then to mate again from July to October.

Dive season Malpelo is an all season destination, but divers will find different

A surface marker buoy with a long reel is an absolute must-have for diving on Malpelo; Diver and corals on the rocky reef (top)

Large spiny lobsters are seen very common; Dive boat, *Yemaya II* (right); School of barracuda in crystal clear water (top)

highlights in each season.

- Large schools of silky sharks (Silky Shark): May to early August.
- Large schools of hammerhead sharks: year-round, best from January to April.
- The rare sand tiger sharks (below 50 to 60 meters!) (Smalltooth Sand Tiger Shark, *Odontaspis ferox*): January to April.
- Whale sharks are kept on all year around Coiba and Malpelo. The best chance you have to see them is from July to September.
- As a bonus, come July-November to find over 1,000 humpback whales in the

waters of Coiba giving birth to young and mating.

Visibility can fluctuate within hours, between ten and well over 30 meters. The best chance for quiet seas is in March and April.

Water temperatures fluctuate throughout the year at the surface, between 26-28°C. There is a thermocline at significantly cooler, deeper water, but it can fluctuate from day to day. It increases from January to April from up to 25 meters to 15 meters. It is usually a little colder than 22°C under the thermocline; from January to April, temperatures may even drop to 15°C. One is usually best equipped with a 5-7mm suit and optional ice vest with hood.

It may all sound like insider's tips, but your dives can also be really sensational. However, one also needs to have a bit of luck. Visibility is generally much more modest in the park than on Malpelo and can often fall back to a few meters. That in this case, neither the past

Booby looking for fish

perhaps, or the giant whale shark floating school on skates or even a mother whale with calf gets to face is obvious.

Malpelo is undoubtedly one of the top ten of the world's best shark and big fish-regions. Seaworthiness, a minimum level of fitness as well as some diving experience—mainly current—is strongly

CLOCKWISE FROM TOP LEFT: Malpelo, a group of islands and rocks 500km from the coast; Several moray eels sharing one cave; Snappers; Eagle ray; Scorpionfish

Malpelo

THIS PAGE: On a jungle tour in Panama you find at least three different species of monkeys, colorful insects and fresh water turtles. Location of Malpelo Island on global map

recommended. A trip combining Malpelo with Coiba is definitely worthwhile. You will have the added chance of experiencing sensational dives around Coiba, too.

Top dive sites

Washing Machine. At this site, divers swim over several rocky shoals at the Isla Coiba Jicaron before getting to a minimum depth of ten meters. There are many schools of surgeonfish, jacks and snapper, but also colorful sea fans, anemones and bright yellow lionfish. Groupers, moray eels, eagle rays, whitetip reef sharks, hammerheads and whale sharks are often found. Very strong currents.

La Nevera. This site is located at a stepped, sloping cliff on Malpelo's west coast. The Spanish, La Nevera, refers to the refrigerator-cold deep currents that often attract large schools of hammerhead

sharks to two cleaning stations here at about 20 meters. In addition, there are many moray eels, groupers, stingrays and Galapagos sharks. Very noticeable swell.

Altar de Virginia. This site is located in a 12-meter-deep bay on the east side of Malpelo, near the pier. With a little luck, you can watch up close schools of hammerhead sharks coming to cleaning stations in shallow water. In addition, there are often eagle rays, a large school of barracuda, turtles and Galapagos sharks patrolling the area. Outside the bay, there are often strong currents.

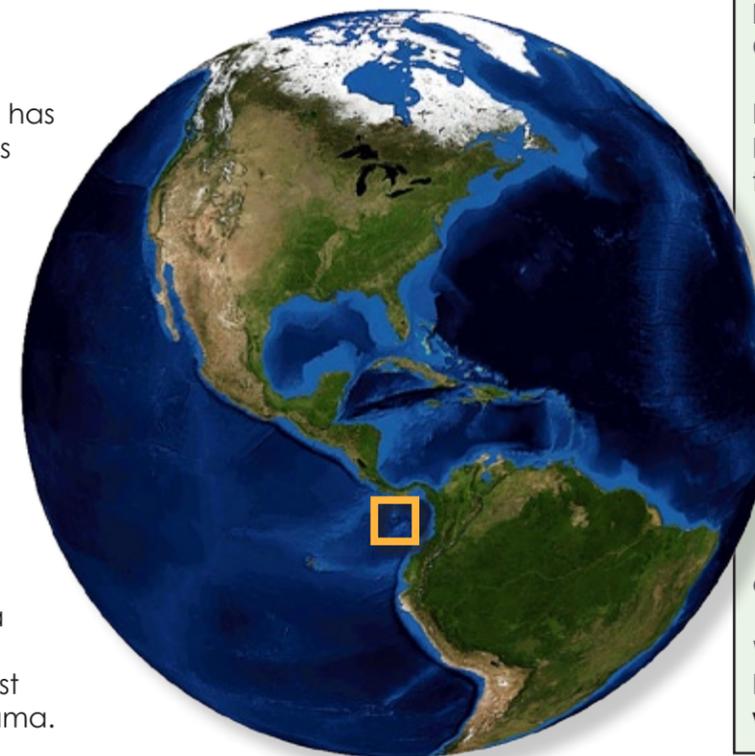

Topside excursions

If desired, you can climb a rope ladder hanging on a metal bridge and climb Malpelo. The barren rocky island is about 300 meters high and houses a small ranger station, a myriad of sea birds and a few

endemic lizards.

Coiba is far more diverse. The largest uninhabited tropical island in the world has very rich flora and fauna with numerous endemic species. As an alternative program to diving, there is trekking by kayak along the rivers of the original, pristine rain forest or walking on deserted white sandy beaches.

Before or after the safari, it is well worth the extra time to spend a few days in Panama. One can enjoy short expert-guided sightseeing tours of Panama Canal, city tours in Panama City, rainforest excursions on foot or by canoe as well as multi-day expeditions in the cloud-enshrouded forests of the highlands or a trip to visit the Kuna Yala Indians on the Caribbean side of the country organized by the Swiss ecologist Rainald Framhein (www.yalatourspanama.com). ■

NASA

FACT FILE

GETTING THERE We took Condor Airlines from Frankfurt to Panama City, with a short stopover in the Dominican Republic (about 12 hours). Usually one night is required before one goes on the four-hour bus ride to Puerto Mutis. *The Yemaya II* departs from this tiny river port, located about ten kilometers from the mouth of the river.

ENTRY REQUIREMENTS Passport (valid at least six months). EU citizens do not need a visa to travel to Panama.

CURRENCY Balboa, linked 1:1 to the U.S. dollar. In fact, there are currently only Balboa coins. Legal tender is, in fact, the U.S. dollar. On the ship, one may pay in U.S. dollars or euros, but only in cash.

COMMUNICATIONS Tri-band capable cell phones work in Panama. The ship usually gets no cell phone reception. For an additional charge, however, a satellite phone is available. Internet is available in Panama City.

DECOMPRESSION CHAMBER Panama City. Due to the distance from Malpelo, a rescue helicopter cannot be used. Conservative diving is therefore advised.

TIME GMT -6 hours (- 7 summer time)

CLIMATE Dry season is from mid-December to early May, and then the rainy season comes, with heavy rain only during the months of October and November.

A Journey Beyond the Three Seas
Israel

Text by Andrey Bizyukin and Yakov Samovarov. Photos by Andrey Bizyukin, Yakov Samovarov and EPSON Red Sea

ANDREY BIZYUKIN

YAKOV SAMOVAROV

On my first flight to Israel, I stretched out in a comfortable chair on EL AL Airlines, enjoyed a kosher meal and reread notes by the famous Russian traveller and pioneer explorer, Afanasiy Nikitin (circa 1466-1472). Only on the approach to Tel Aviv did I suddenly realize how small a country Israel was, and that it bordered three seas. Now, I had a unique chance (just as the great Russian explorer did) to visit these three seas—the Red Sea, the Mediterranean Sea and the Dead Sea—all in one trip.

My acquaintance with the country began in Eilat—Israel's southernmost city. A line of quaint hotels stretched for several kilometers along the coast, and many dive centers were located here. One can find excellent places for diving at the northernmost end of the Gulf of Aquaba on the Red Sea.

With my dive buddy, Yakov Samovarov, I would dive the missile wreck, *Satil*. I asked Yakov to tell me about the day's dive. "Six or seven years ago, I did my first dive on *Satil*," said Yakov. "It was formally known as the Israeli Navy missile boat with the proud name of *Sufa* (Storm)."

In 1993, *Sufa* was decommissioned from the Navy and sunk in Eilat as an artificial reef. All military equipment was taken out before this procedure. Now, the ship rests on a level keel very close to shore.

The bow of the *Satil* is located at 18m,

the stern, at 21m, with a maximum depth of 24m. The ship has long been overgrown with a thick layer of algae and corals. Inside and around the vessel are darting swarms of sea bass, barracuda, lionfish and rays. Beginners can dive to the top of the wreck, and experienced divers are allowed to penetrate the interior.

We arrived at the Marina Divers club, unloaded the gear from the car, drank some water, heaved our scuba gear onto our backs and headed out to the sea via a cozy beach. The beach crowd slurped ice drinks through straws. Sunbathers lounged in deck chairs under sun umbrellas and looked with interest at the men in black wetsuits, fins in hand and scuba gear on their backs.

We were "men in black", bent under the weight of our equipment, moving in a chain, like ants, eagerly heading

Diver and anthias on coral (above) and with sergeant majors and cornetfish (right), Red Sea, Israel
PREVIOUS PAGE: Underwater photographer and lionfish

ANDREY BIZYUKIN

THIS PAGE: Scenes from the wreck of the *Sufa*

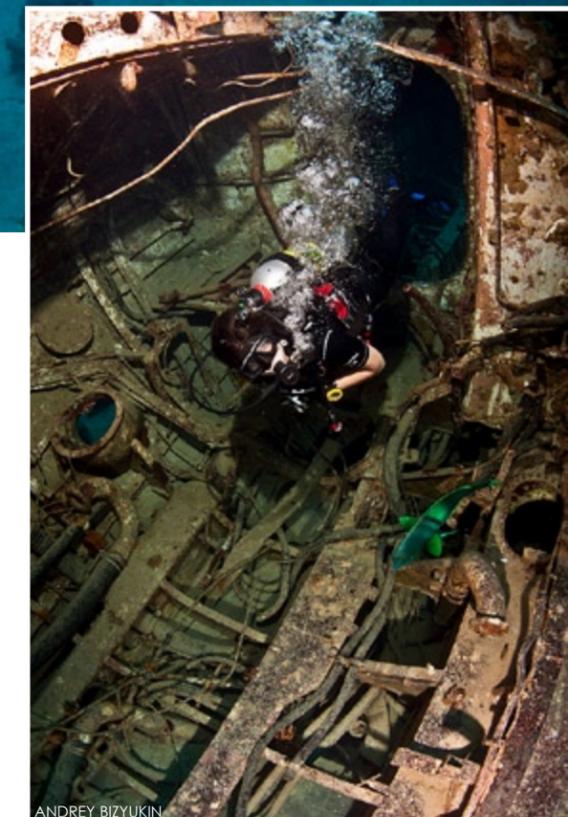

antennae protruded from deep cracks.

In the corner of my eye, I noticed a small white headed snake eel, but there was no time to consider it. I had to catch up and hang out in the wake of a couple of dozen divers kicking their fins, when a huge ship appeared suddenly out of the blue shadows.

It stood exactly on its keel,

and at this point, the deck could not be seen. For some reason, the Flying Dutchman came to mind. In some places, the vessel's rusty sides had had time to acquire hard corals—poles, shrouds and the mast were lushly overgrown with bushes of white and reddish-brown soft corals.

We got to the bow of the wreck, the upper deck, at a depth of 18m. As experience div-

ANDREY BIZYUKIN

towards the water. I couldn't help but think what a shame it was that the sun worshippers we passed would not see all the beauty that could be found in the underwater world.

The wreck of the *Satil* was located 90m from shore. Diving there was easy, even for a novice. A striped, red and white buoy marked the location of the wreck. The first time you go, you should probably bring a compass for direction. Frankly speaking, finding a 45-meter ship underwater is usually easy, but here, it's

almost impossible. I say almost, because from time to time, there have been cases where divers have managed it without a compass.

We got in line with Sasha, our dive guide, as two links in the chain of divers entering the water. Sasha had warned me that the bottom was rocky, with a lot of large slippery boulders, so I had better to go slowly, especially if there were waves on the surface, and my hands were busy steadying the equipment. We submerged in the water to our

waists, donned our flippers, spit into our masks to avoid misting, placed our mouthpieces, exchanged okay signals and dived.

We started the dive from a shallow place and quickly reached a steep slope. The depth increased rapidly. At a depth of 10 meters, a small cliff rose two meters from the bottom, covered with corals and shoals of colorful fish scurrying around. White boxer shrimp with long

ANDREY BIZYUKIN

ANDREY BIZYUKIN

ers, we first inspected the round hole in the bow. This was the position for a 76mm cannon. On the stern, there were two large rectangular cutouts; these were the positions for the missile systems.

It was nice to see so many divers underwater. Some of them swam towards the ship, some swam back. There were divers with single cylinders and twinsets, with nitrox and trimix, with underwater scooters and rebreathers. It felt like a group of European diving elite had gathered here underwater in Eilat.

We looked at the wreck from all sides, climbed up into the hold, inspected the crew cabins and the captain's wheel cabin. We stopped to enjoy the spectacular views of soft red corals. We took pictures. It was a great wreck!

On the way back to the shore, we observed colorful tropical fishes living in coral trees, chasing a striped sea snake, swimming in a flock of curious, striped fish.

When I was on my way back to the

ANDREY BIZYUKIN

back to Manta Diving center (the hosting dive center of the Epson Red Sea competition) to change my cylinders, I met a company of cheerful divers: men on a creative scouting trip with underwater photo and video cameras and made-up models dressed in brightly colored ball

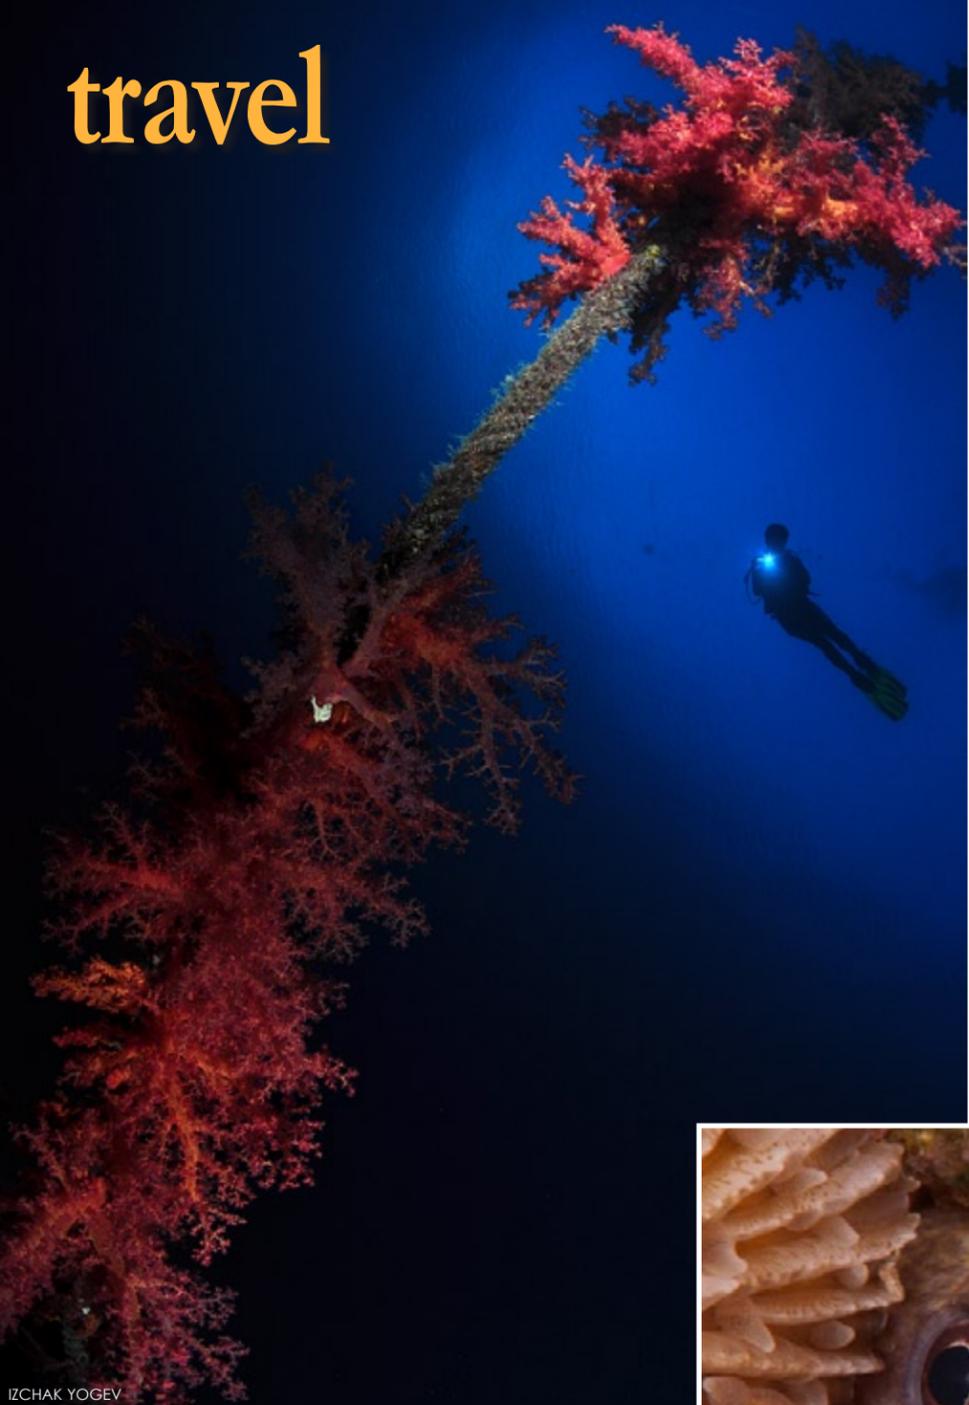

gowns and stylish, fashionable clothing. We started talking, and it turned out that the Epson Red Sea competition was going right now, here in Eilat, and all my new friends were participants in this grand event—the

choose the right place; the Red Sea coast near Eilat was a perfect fit. Pilosof collected the most authoritative international jury. With the credibility of Pilosof and a huge number of his friends, the event has managed to grow without too much difficulty. Upon finding sponsors and money, everything began to turn around, and when Epson Europe joined the festival as a sponsor the festival got a new name—Epson Red Sea.

Today, Epson Red Sea is the joint project of Pilosof and Epson. The next competition takes place 4-10 November 2012. They have a prize fund of US\$100,000 dollars, a large number of partners and

VITALII SOKOL

international festival of underwater photography, video and fashion held annually in Israel.

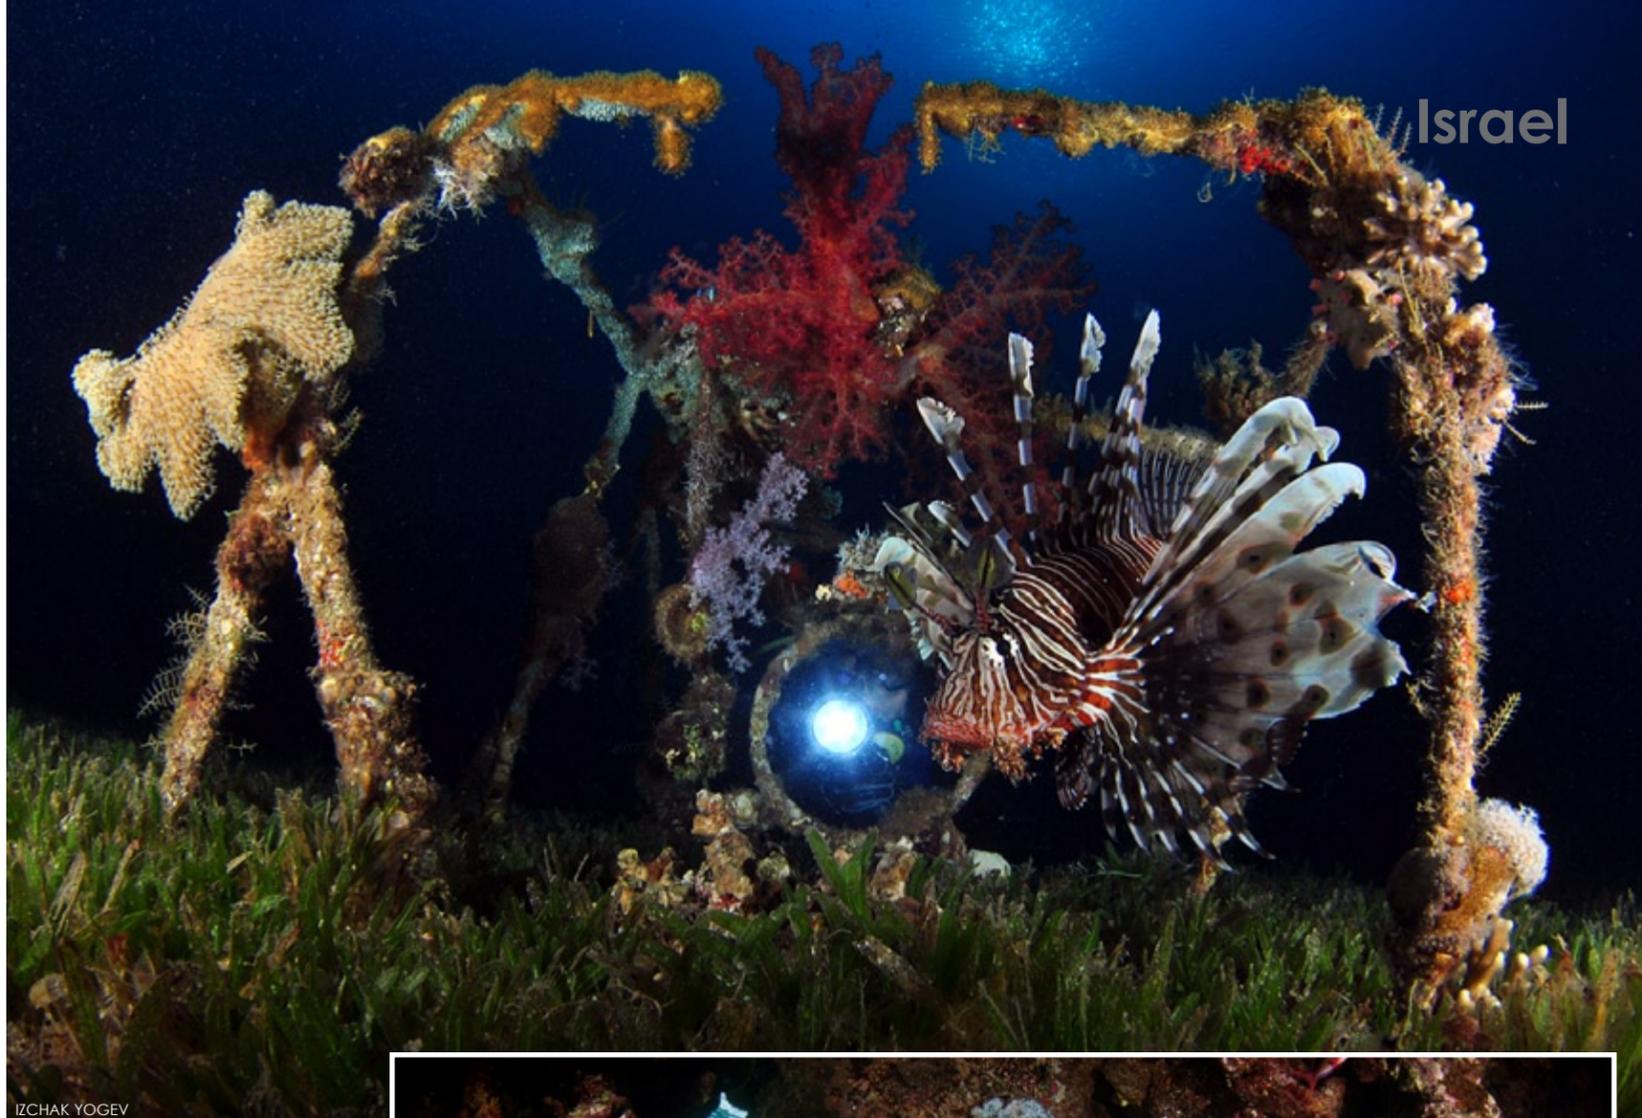

Epson Red Sea 2011

Several years ago, David Pilosof, a renown underwater photographer of Israel, decided to organize a festival of underwater photography, but in a completely new format. The festival would be interesting and attract visitors and participants—talented underwater photographers—from all over the world.

For this purpose, it was necessary to

ANDREY BIZYUKIN

IZCHAK YOGEV

YAKOV SAMOVAROV

Corals (top right) by Izchak Yogev, Israel, second prize winner of Five Images Category, Epson Red Sea 2011

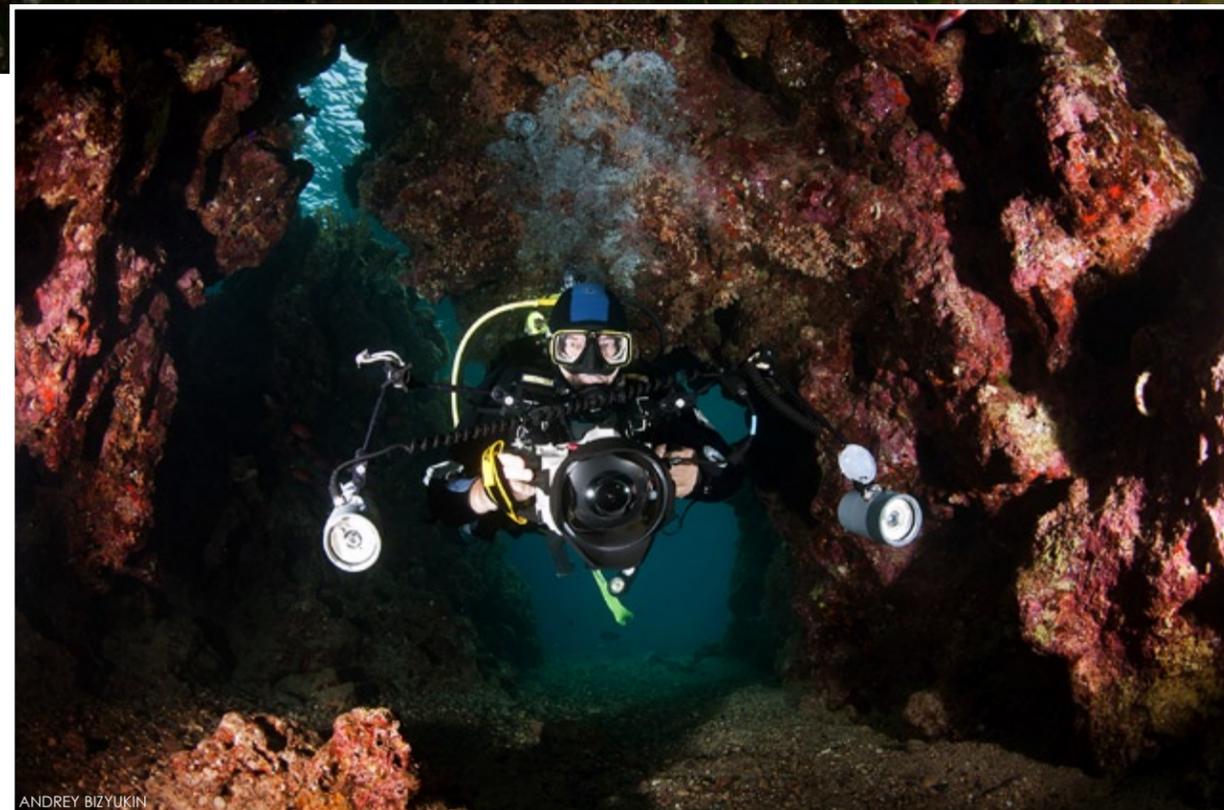

participants from around the world. In order to participate in the event, underwater photographers choose a suitable category for their project, and during the few days of the festival's shoot-out, they have to capture images of the underwater world of Eilat. The categories listed in 2011 included: Five Images (series of five photographs), Best Singular Image, Amateurs (for beginners), Children of Epson Red Sea (images by kids), Fish and Fashion, Fish of the Year, Jury's Prize, The Mayor's Prize, and Video.

In 2012, for the first time, there will be the National Team category. "Each team participating in the National Team category should consist of three photographers from the same country, competing in the Eilat Shoot-Out," said Pilosof. "Photographers can team up independently. Alternatively, photographers can inquire at the competition office about other photographers from their country partic-

ipating in the Eilat Shoot-Out for the purpose of joining forces. There is no restriction on the number of teams originating from the same country." For more information, interested photographers can visit www.eilatredsea.com.

The Red Sea at Eilat

Eilat's underwater world is full of life, and it is extraordinarily diverse. There are many colonies of hard and soft corals scattered along the bottom, attracting a variety of fabulously colorful tropical fish. One can find moray eels, groupers, lionfish, parrotfish, needlefish, rays and underwater snakes, puffers, glassfish, etc.—the typical Red Sea inhabitants. There is always clear, warm water, an absence of strong currents and convenient, easily accessible shore diving, which makes Eilat a favorite place to dive for underwater photographers at any level.

secrets of the professionals, as well as skills of the best masters of underwater photography from America, Europe and Asia.

During break times between dives and before the official gala awards ceremony, we visited with our new friends the ancient copper mines of King Solomon located just an hour's drive from Eilat. What amazing rock formations—works of wind and water over thousands of years.

In this place, there was a collection of archaeological sites, ancient rock paintings excavated in the ancient world's

smelters, and traces of the thousand-year-old process of the development of humankind.

In the past, it was a land full of life. Now, it is a mercilessly sun-scorched desert. There are just a few centimeters of rain for year.

Today, this land is the home of the Bedouins. They provide camel rides for tourists and offer tea and cakes cooked over an open fire.

This amazing archaeological park with its exotic red rock landscape was disturbing in a way, providing

ANDREY BIZYUKIN

glimpses into our genetic memory and ancient civilizations. It did not leave anyone indifferent.

We said our goodbyes to our new found colleagues and photographer mates. We had become good friends over these three unforgettable days of diving, and we all had fallen forever in love with the underwater world of Eilat. For me, now, it was time to head north to the Dead Sea.

ANDREY BIZYUKIN

The Dead Sea

—How to become a world champion deep sea diver

The opinion exists that the Dead Sea is one of the most saline seas of the world. The salinity of the water is 310ppm, which is almost ten times more salty than ocean water. To dive here, you have to put on about ten times more weight on your weight belt. The whole set of equipment for diving in the Dead Sea will weigh from 65 to 70kg

depending on the weight and size of the diver. Despite glum thoughts about the very heavy weight, I have indeed been able to look at the Dead Sea far below the waves.

Our encyclopedic, erudite guide, Irad, told us that the water of most rivers in the region is now almost entirely used to irrigate agricultural fields in Jordan, but in times past, they filled the Dead Sea. That is why the level of the Dead Sea is falling dramatically—about one meter per year. The current level of the Dead Sea is 420 meters below sea level and the standard sea level of the Baltic Sea.

THIS PAGE: Scenes from the Dead Sea. Photographers can only take top side shots because of the high salt content of the water, which corrodes camera gear

Water is drying up, and the sea is becoming more and more salty. The huge concentration of rare minerals makes this a unique water source for rare and valuable chemicals. Here at the Dead Sea in Israel is the largest factory for the extraction and purification of chemical elements from supersaturated salt sea water. However, prolonged exposure to water of such super saturation can corrode skin and can cause severe burns to the eyes and mucous membranes. It is said that this water can corrode metal and even the rubber seals of underwater cameras. Swimming and diving in this water becomes a real extreme activity, requiring special equipment that is resistant to chemically aggressive environments.

According to the authoritative opinion of *National Geographic*, the Dead Sea was included in the list of the seven wonders of the world in 2012.

We sank, descending deeper and deeper on a comfortable sled tethered to ropes, getting closer and closer to the floor of the Dead Sea. As experienced divers, we knew we had to equalize the pressure in our ears as often as possible in order to reach a depth of 420m. To get to this incredible depth, I did this countless times. Finally, after a half an hour descent, we got to the bottom of a huge valley near the bottom of this legendary sea.

The sea was stormy, even at a depth of 420m. The entire coast line and the slopes into the sea, visible from the shore and disappearing into the depths, were covered with a thick layer of large

ANDREY BIZYUKIN

dense that one did not even need to move one's arms or legs to stay afloat. Like an unsinkable boat, a person could easily, effortlessly float on the surface of this super saturated salt brine.

We had to be very careful not to splash water and avoid getting water in our eyes and on our lips. A total dive time of only 15 minutes was considered safe and recommended by doctors. Then, we had to come back

ANDREY BIZYUKIN

to the shore very carefully, trying not to injure our arms and legs on the sharp salt crystals along the sea's edge. Freshwater showers were highly recommended after the dive in order to save our skin from dehydration and becoming hypertensive to the chemically aggressive solution of the sea.

Finally, the long awaited sweet moment of glory came. The dive record was set: the deepest dive—420 meters—carried out on a sled. It was worth it to take the calculated risks for this very heroic moment.

Jerusalem

We continued our trip to the north end of the country and made a stop at the

watershed area between the Dead Sea and the Mediterranean Sea. We stayed for a day in Jerusalem, one of the oldest cities in the world. It's the city of three major world religions and the capital of the Israeli state.

Making our way through the narrow streets of Old Town, between lots of souvenir shops and high-profile promotional offers, we got to the holy places.

The Wailing Wall—the western wall of the temple of King Solomon—was built over 3,000 years ago. It is sacred to all Jewish people, a place where people prayed in the days of King David. Today, the faithful here, as they did many hundreds of years ago, asked for their deepest wishes, putting little notes in the

ANDREY BIZYUKIN

salt crystals sparkling in the sunlight.

But despite the frightening stories told by our guide, it was impossible for us to miss out on the incredible opportunity here. The vain desire to feel like pioneer-

ing deep-sea divers pushed us to take a desperate risk, and so, we dove in.

One by one, we tried to dive into this magical sea. The water was so

cracks between the stones of the ancient walls. The feeling of holiness in this place was almost palpable. Prayer did not stop here; it went on all day and all night.

The Church of the Holy Sepulcher is the site that has attracted Christian pilgrims from around the world for centuries. It is believed to be the location of the crucifixion of Jesus Christ as well as the place of Christ's burial and resurrection—both the hill upon which Christ was crucified (Golgotha, or Calvary) and the ancient cave where

Jesus' body was laid after removal from the cross. Another sacred place is the Mount of Olives—believed by early Christians to be the site from which Jesus ascended into heaven. Over the centuries, its slopes have been covered with countless tombs—some of the world's most expensive. Today, it is one of the most prestigious cemeteries on Earth.

The Mediterranean Sea at Caesaria

After Jerusalem, our way led farther

ANDREY BIZYUKIN

THIS PAGE: Divers explore remnants of ancient ship wrecks in Mediterranean Sea. Jordan River (right) and friendly otter on shore

drinks, and joyful communion in such a friendly atmosphere of good will, it would be difficult to find a similarly creative organization of night entertainment anywhere else in Europe or Asia.

The morning after our evening city tour, we traveled not far from Tel Aviv to the town of Caesarea—the ancient port of King Herod. There were a lot of rare historical artifacts at the bottom of a shallow enclosed bay built here in Roman times. All these objects were being studied by underwater archeologists.

We dived with an experienced guide. The water temperature was cool—21-22°C. Visibility was about three meters. In order not to get lost in such troubled waters, we had to stick

ANDREY BIZYUKIN

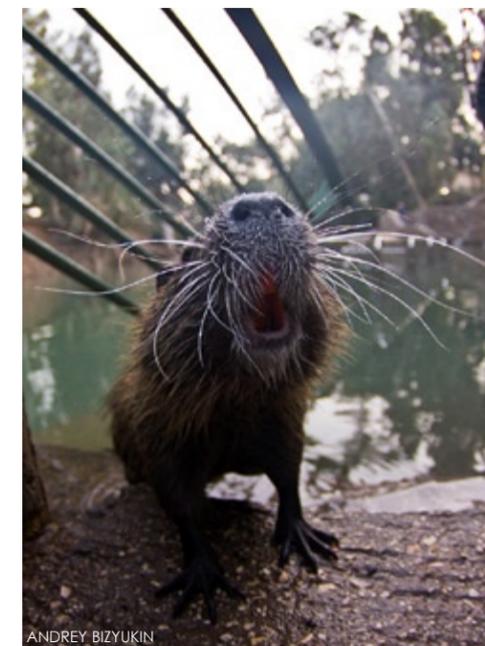

with the group. We found an ancient marble column not so

far from the royal palace. It had fallen into the sea from aboard a Roman galley over 2,000 years ago. Now, only curious divers and fish were visitors of this exotic underwater museum. We had a great opportunity to admire its grandiose size and excellent quality of marble.

Despite the relaxed feeling of being in a museum, the muddy and cold water made diving here quite extreme. Lagging behind a couple of minutes to take pictures, I got distracted, lost track of our dive guide and immediately got lost in the muddy water. I had a long swim alone among the piles of ancient stones, old anchors and remnants of sunken ships. Only in open sea, in a strong sea swell, did I finally catch up with my friends, finally. They were busy—enthusiastically involved in taking shots among numerous underwater rock ridges.

Jordan River

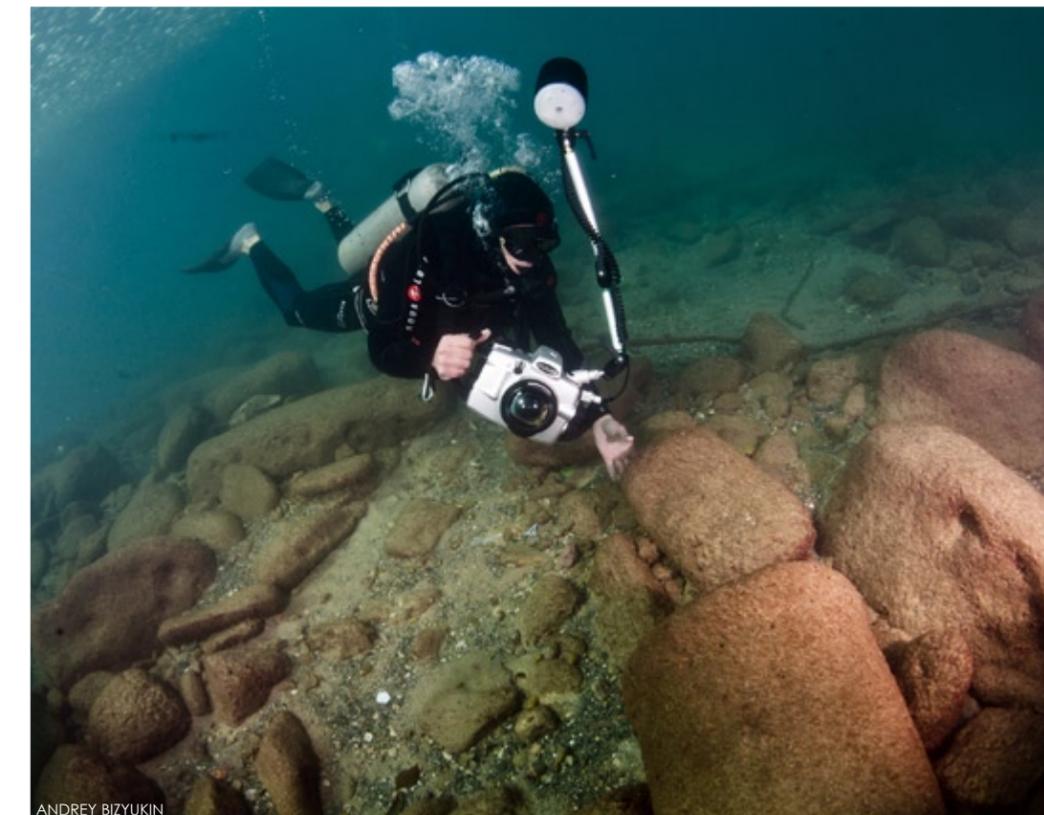

Continuing on our trip north, we spotted the Golan Heights

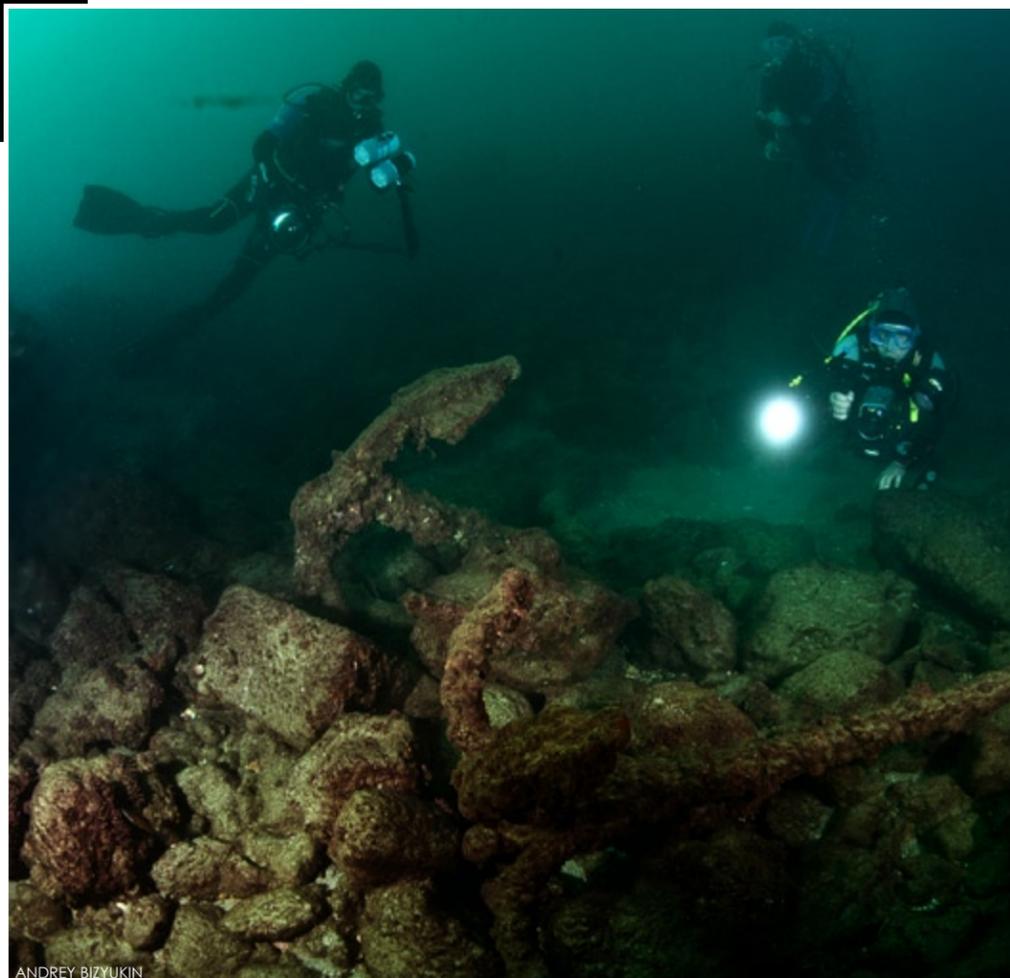

ANDREY BIZYUKIN

in the distance near to where we would find the Sea of Galilee and the Jordan River—two Christian holy places. These sites were considered holy because of the water. So, we thought there should be a lot of people who would want to immerse themselves in the holy water, underwater.

We investigated these loca-

tions for the presence of a diving infrastructure. But we were unsuccessful, and found the water of the Jordan River to be incredibly muddy. It was home to a lot of curious otters and catfish, totally unafraid of people. But diving here with scuba would only be possible through touch, as visibility was low to nil.

The house of St. Peter and the ruins of one of the oldest synagogues were

located right on the Sea of Galilee. The water here seemed much more transparent. We had an uncontrollable urge to dive here at least, but we couldn't find a dive center that would help us do so. After making an unsuccessful first reconnaissance trip, we had to just be satisfied with examining approaches to the water and making future plans to come back here again better prepared.

Afterthoughts

On the flight home, I stretched out my legs in a comfortable armchair on EL AL Airlines, enjoyed a kosher meal and flipped again through the travel notes of Afanasiy Nikitin. What else could the renowned explorer have written about this small intriguing country? Israel has absorbed centuries-old cultures, experience, knowledge and traditions of countless peoples

of the world. It has become an historical site, often over the centuries, a center for the suppression of cultural integration of world civilizations. What insights can one reach after a tour here beyond the three seas in these contemporary times? ■

The authors express their deep appreciation and thanks to the Israeli Ministry of Tourism, EL AL Airlines (www.elal.co.il) and

special thanks to Irad Fenichel (irad1@netvision.net.il)—a most encyclopedic, erudite guide who helped us to understand and appreciate the culture and traditions of Israel. Yakov Samovarov and associate editor Andrey Bizyukin are underwater photographers from Moscow, Russia.

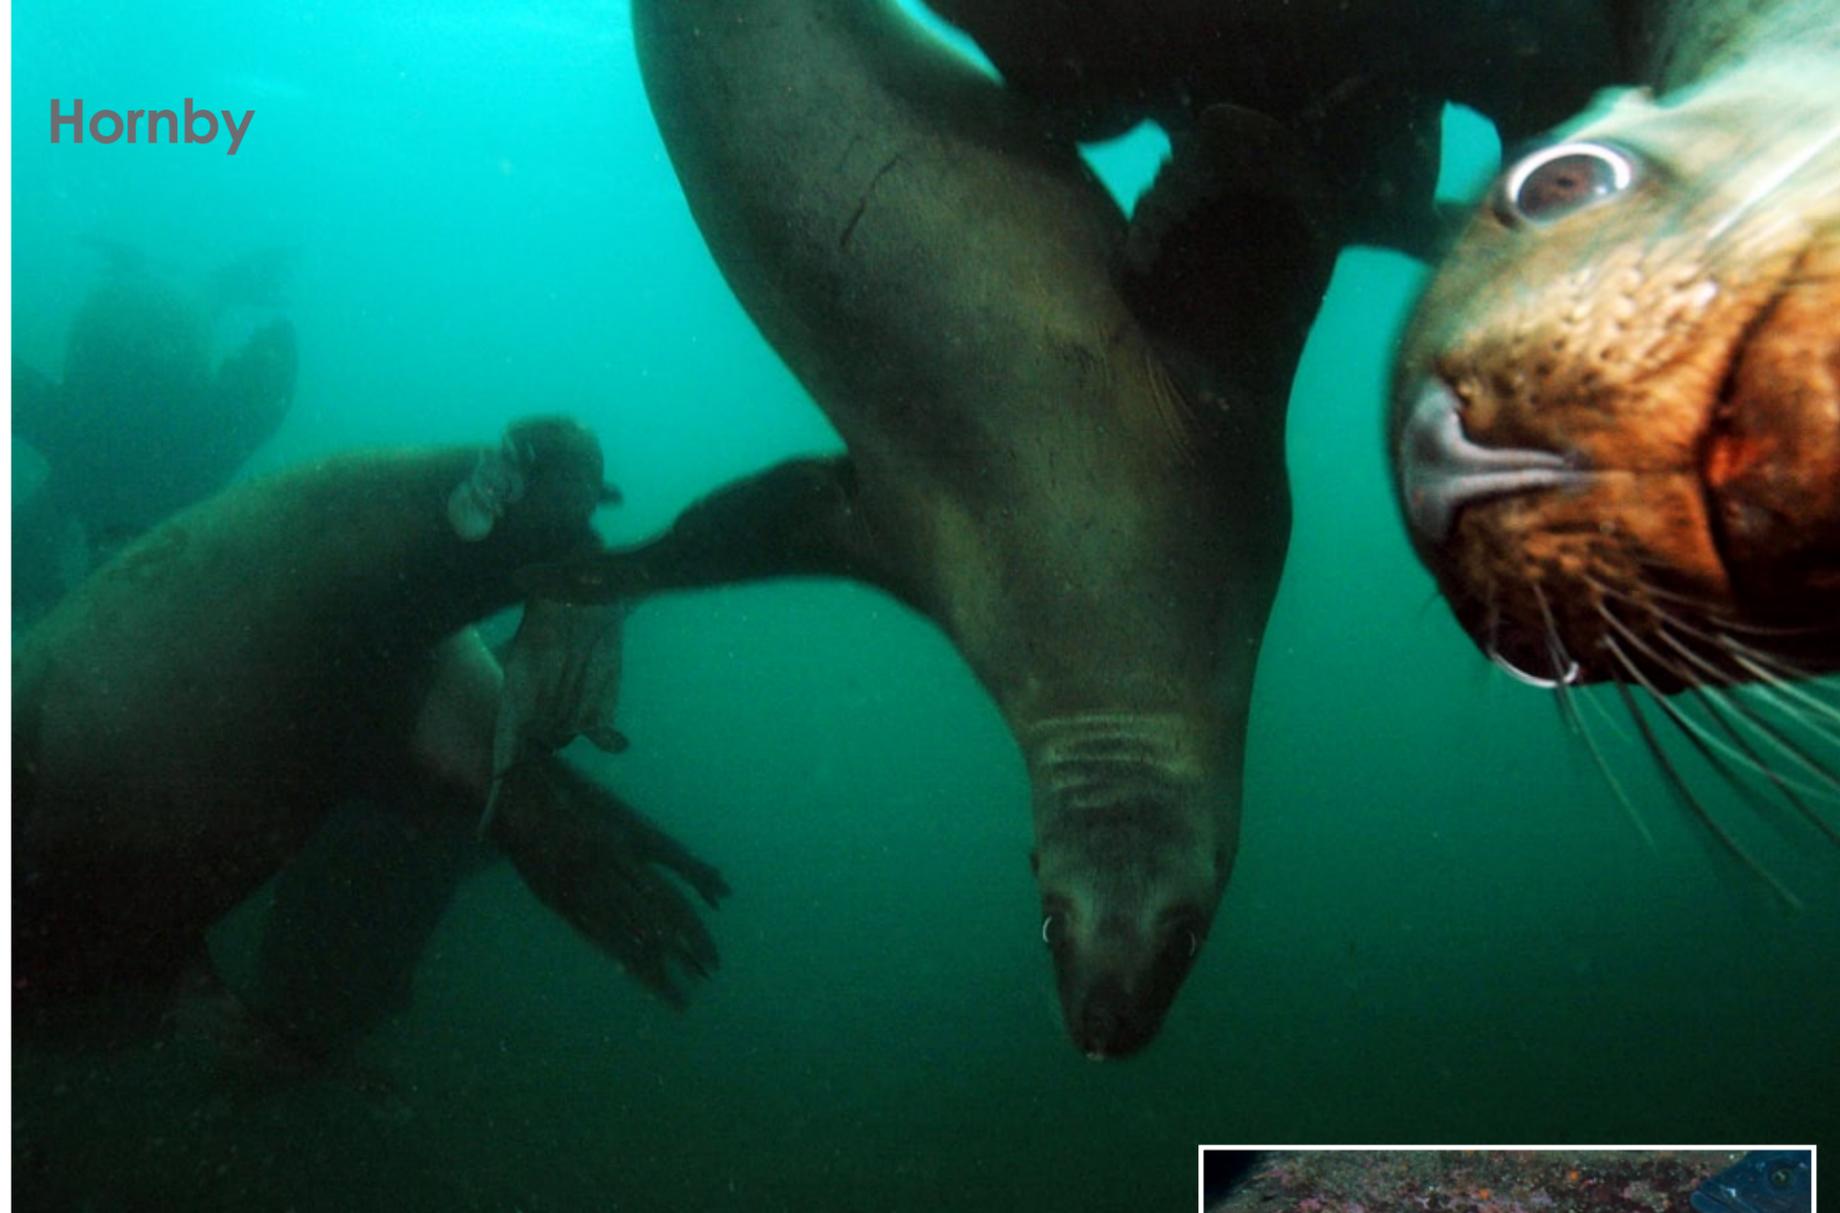

British Columbia Getaway Hornby Island

and Wayne Grant

Hornby

After my husband and I returned from an exhilarating encounter with a group of playful sea lions at Norris Rocks, I must say, our visit to Hornby Island was a great dive escape in British Columbia, Canada! When we weren't playing tag with sea lions, we were exploring unique underwater terrains or photographing wolf eels, Puget Sound king crabs, rockfish, rose sea stars and other colourful invertebrates.

I can't think of a better place to be with your favorite dive buddy or friend, than spending a relaxing weekend at a top-notch dive resort where one naturally falls into the routine of eat, sleep and dive. And need I say, the food was always fresh, well prepared and delicious. The operation, Hornby Island Diving, is run by Rob and Amanda Zielinski, who cater their professional service to divers and their families almost year round.

"The sea lions are the main attraction during the winter months," said Rob with a big smile, "They arrive in October, so we dive with them in November and January through March."

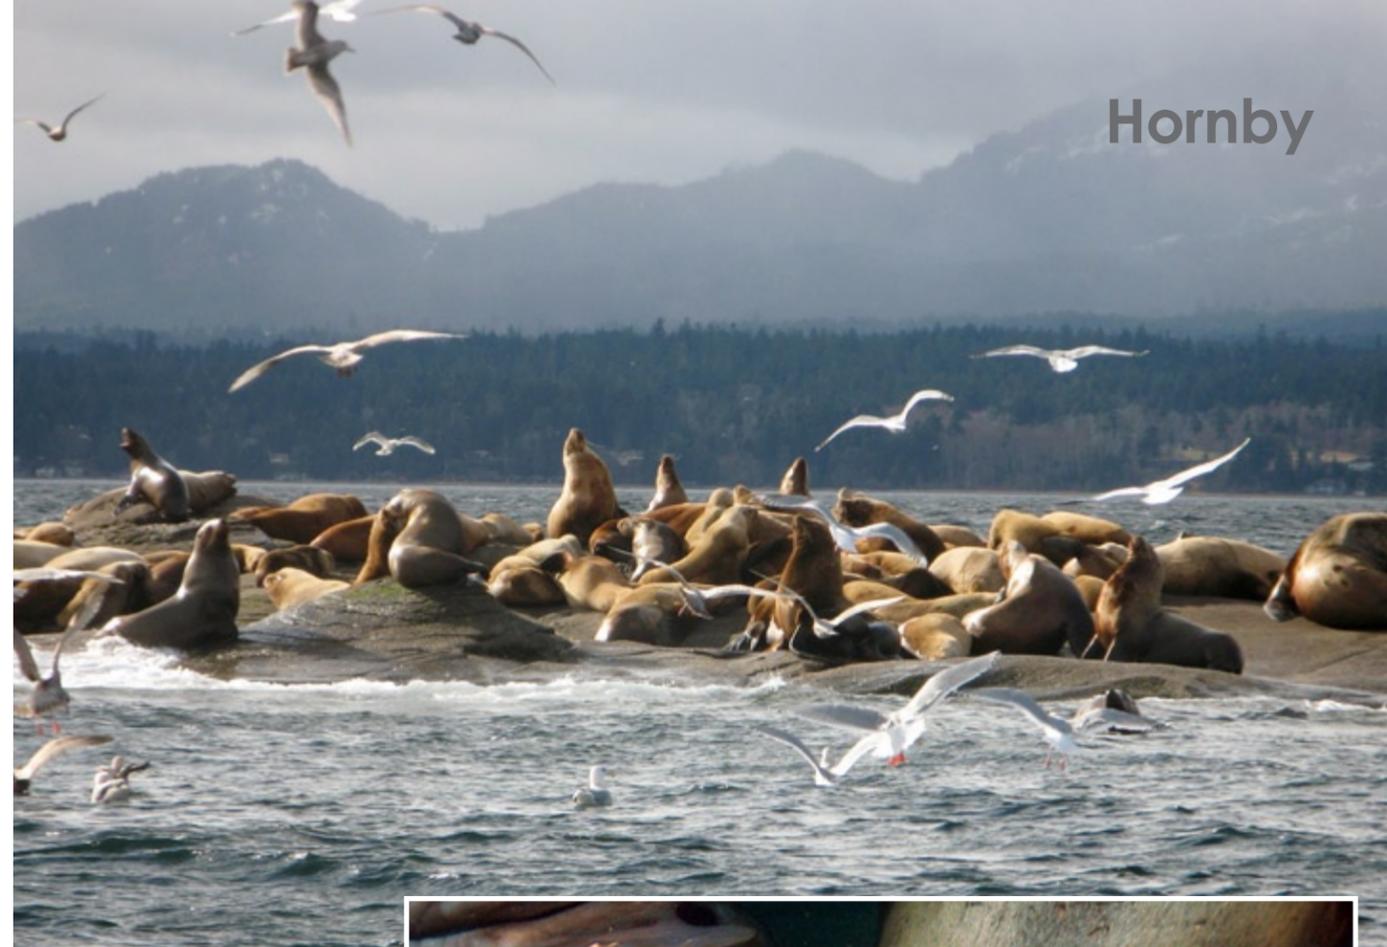

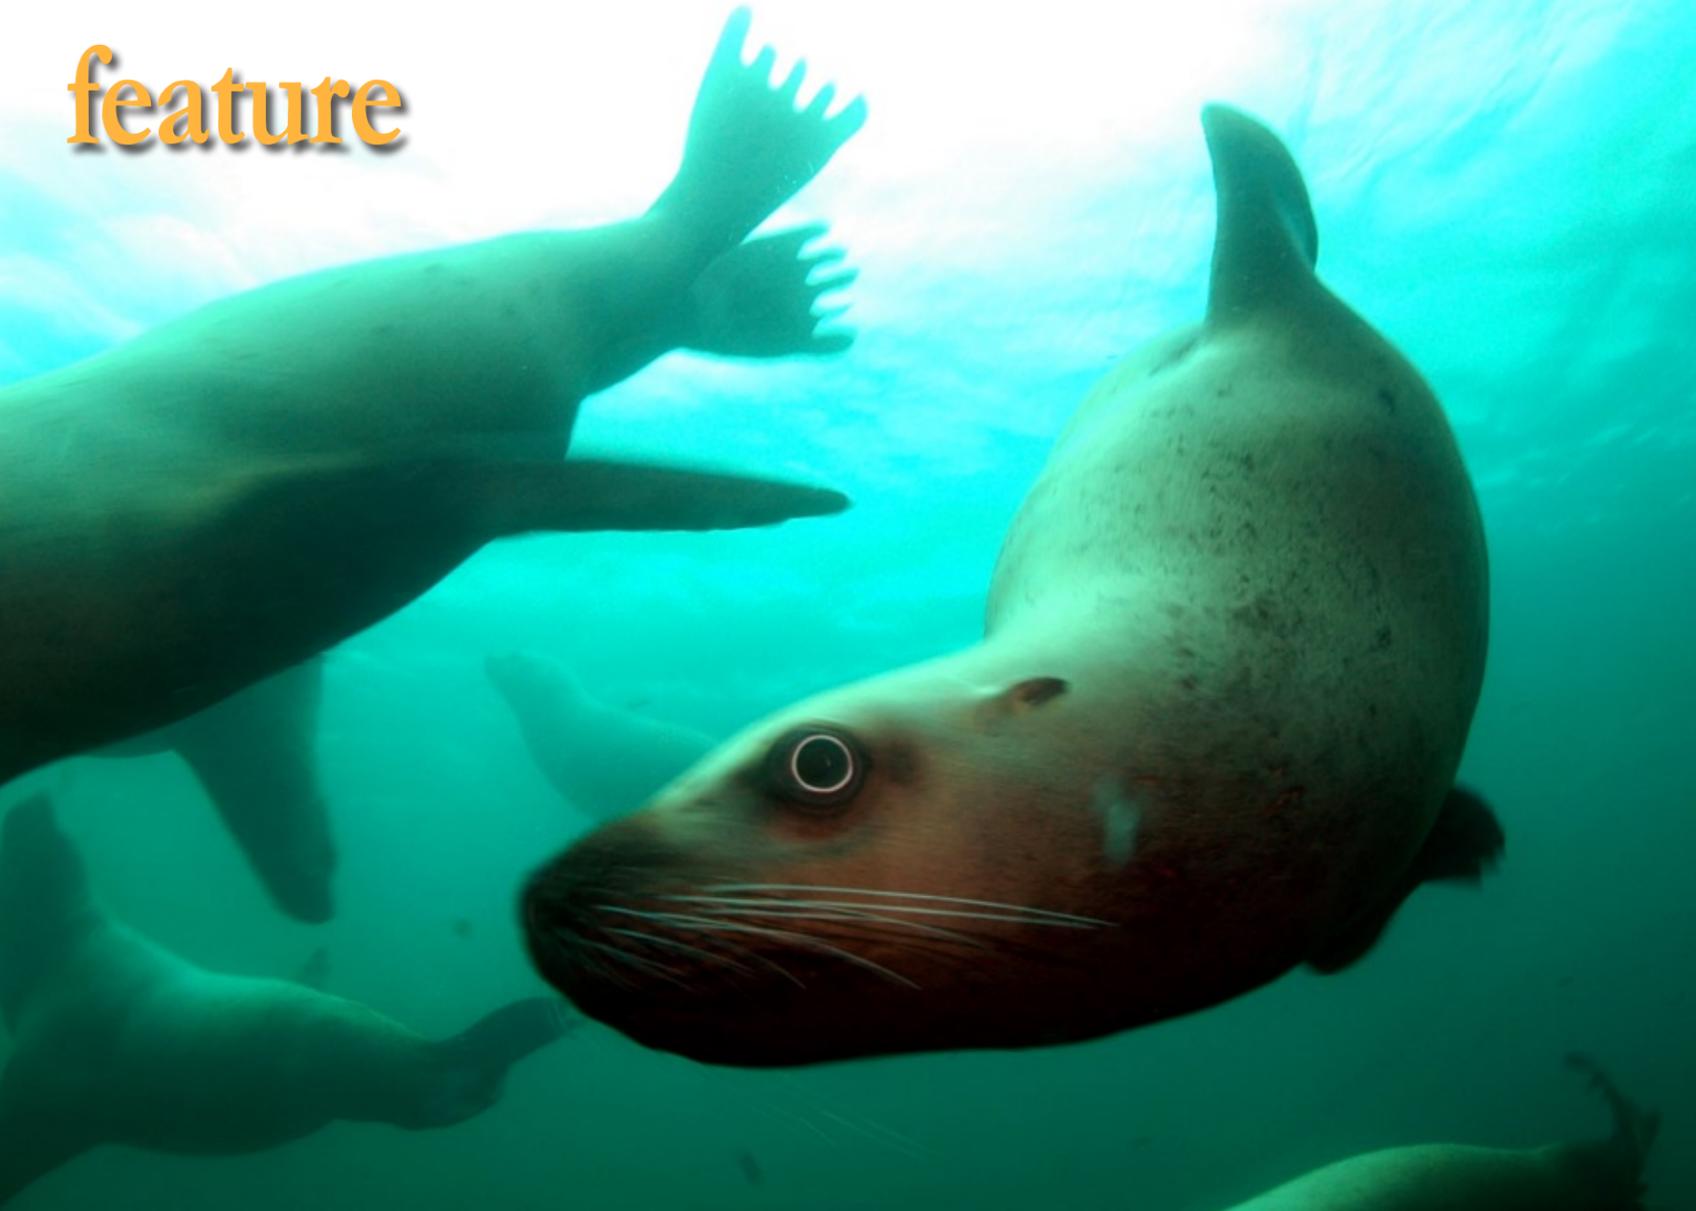

Our journey actually took place in March of this year, just before the her-

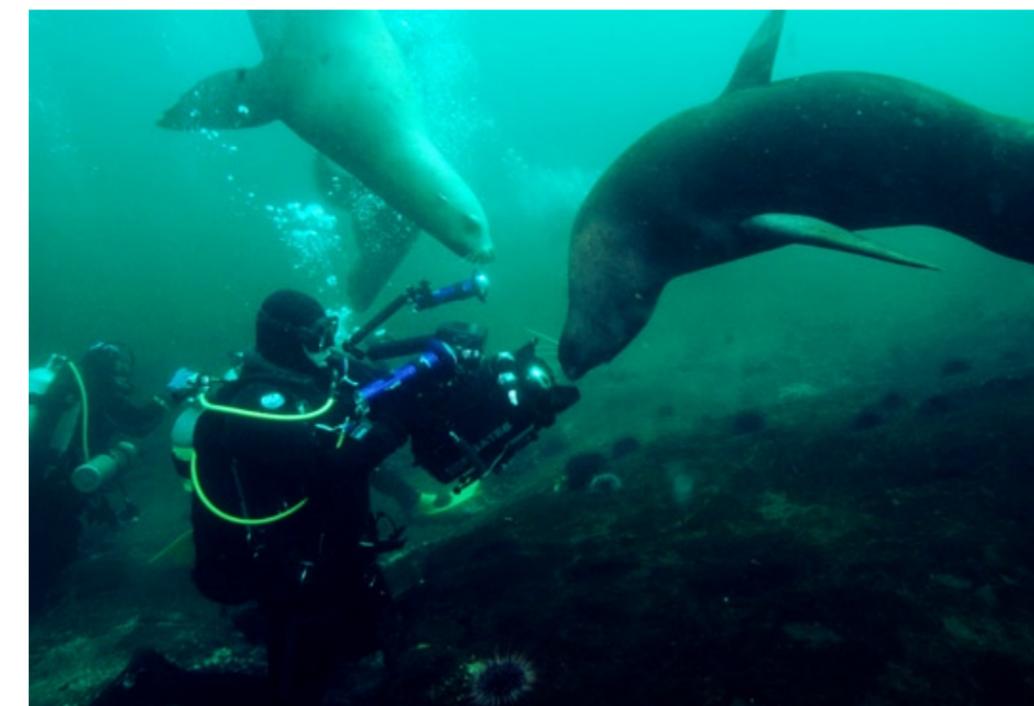

ring spawn, so underwater life in general was a bit on the wild side with several other marine species getting ready to spawn as well. Visibility was good. For our first dive, Rob put us in with the sea lions.

CLOCKWISE: Diver and seastar. Playful sea lions; Crab PREVIOUS PAGE: Curious sea lions with diver

CLOCKWISE FROM LEFT: Sea lion takes a closer look into the lens; Sea lions on the rocks; Whiskers on the sea floor; Curious sea lion checks out the video equipment

I could just imagine what the huge critters were thinking as our group of divers entered the water, "Hey, it's the scuba toys again!" Or maybe it was more like, "Look, the chew toys are back!"

Staying in the 20- to 30-foot depth range and careful not to get too close to the reef where the huge males were lounging, we sat in what Rob called a 'chicken circle' and waited with cameras and videos in hand.

I remember last year's encounter and sitting with other divers gave the critters someone else to pick on, so no problem on my part being part of a chicken circle. It didn't take long before about 20 began buzzing the divers; some came through individually and others in small groups, but all were fast moving.

Several made a point to rub up against the divers while others would hang upside down right in front of us and stare with their big

round puppy-dog eyes. It was so cool when they noticed their reflections in our dome ports.

On occasion a mob of them would rush from the surface down to one of the divers who usually strayed from the circle. This is when I discovered it was possible to actually yell into my regulator! I'm sure after that they just targeted me to hear the squeaky toy make noise.

Other critters

Aside from the sea lion harassment, I mean encounter, we went to several sites where the pace was a bit slower. On one of the dives in

30-40 feet of water, tube-dwelling anemones covered a sandy bottom, nourished by a gentle current. Orange sea pens, painted anemones, rock scallops and small fish enjoyed the

flow along with nudibranchs, gobies and sea stars.

Fortunately, I had changed to my camera lens to a 50mm on my Nikon DSLR and was enjoying some close-up photography when I came across a great sculpin guarding eggs. Delighted with my find, I proceeded to snap away until a young wolf eel appeared, maybe two to three years old.

Needless to say, I was distracted and began to follow the wolf eel on its hunt for snacks. After a dozen or so images and not much action, I again became distracted by the multitude of great sculpins guarding nests of eggs. Later, Ron Akeson, the owner of Adventures Down Under in Bellingham Washington, told me he took up where I left off and followed the wolf eel for video footage. I listened with excitement as he told how

the wolf eel kept going up to the sculpin eggs and gulping mouthfuls! When one of the guarding males protested and bit the wolf eel, it turned and grabbed the fish and shook it! I should have waited.

Keep in mind, this was just two of the weekend's dives. With an average of two to three dives per day at over 30 main sites, divers are sure to have a memorable holiday.

"Since we mainly dive mostly around southern Denman and Hornby Islands, our longest boat ride is only 15 minutes from the lodge," said Amanda. "Our weekend dive package includes two boat dives,

one night of accommodation, all meals, airfills, tanks and weights. Non-divers are also welcomed."

CLOCKWISE FROM ABOVE: Copper rockfish hides in a crevasse; Tiger rockfish; Sea pen; Young wolf eel; Sculpin guarding eggs

Dive resort

It was 1972 when Bob and Ann Zielinski began offering diving services on Hornby Island. They also bought the 42-foot boat *Oceaner* in that same year. Business quickly grew into a thriving operation where many dive shops brought their students to do their checkout dives or recreational divers to see the mysterious sixgill sharks. Needless to say, Rob grew up around diving, getting certified in 1988.

said Rob, "We like to either take out only recreational divers or only technical divers."

This is good, because technical divers usually have a lot of gear!

After taking over the family business in 1994, Rob was joined later by Amanda in 1997 when the lodge underwent a complete rebuild. The following year they had a new 35-foot custom dive boat

designed and built, accommodating up to 12 divers with single or double tanks or even rebreathers. After personally diving on the boat, I really like how easy it is to enter and exit the water.

"When we take groups out,"

Topside excursions

As far as topside activities, Wayne and I visited Helliwell Provincial Park to photograph scenic ocean views, island shore birds and other wildlife. The organic farms were fun to purchase fresh fruit

and veggies from, but Wayne's favorite stop was at Island Spirits Distillery where PHROG gin and vodka is made, infused with various flavors. I think he really liked the taste testing best.

CLOCKWISE FROM LEFT: Sunstar spawning; Dive boat at dock; View of beach at Provincial Park; Painted anemones

NASA

available if needed.

During my stay, I took advantage of the sauna to warm my bones and the heated drying room for my dry suit undergarment. Wayne said he gained five pounds over the weekend from all the seemingly endless good food. I was pleased they could handle my special vegetarian dietary needs.

Rob holds a Divemaster rating and Amanda is a Dive Instructor. Charters usually consist of a weekend excursion, arriving on Friday for dinner with two to three dives on Saturday and two dives on Sunday. This leaves plenty of time for catching the two small ferries back to Vancouver Island and connecting up with the larger ferry back to the mainland. See: www.bcferries.com.

Let their experience and professional attitude carry you away on an unforgettable journey under BC's emerald paradise. Information and directions can be found on Hornby Island Diving's website at www.hornbyislanddiving.com ■

One of the sites in the area preferred by technical divers is to the wreck of the *Capilano*.

Up to 20 can stay comfortably in the 11-guest room two-story lodge. A large common area and a place to hang and wash dive gear is available for use. For visiting underwater photographers, there are two workstations and a well-equipped library for identifying the critters. Their compressor pumps regular air or nitrox. Argon and mixed gases are also

Georgia

Unique Dive Site

South Georgia is the most well-known of the Falkland Islands, also called *Islas Malvinas*. It lies nearly at the end of the world in the Southern Atlantic Ocean. To find this place on the map, draw an equilateral triangle with one vertex on Cape Horn and another on the Antarctic Peninsula. The third vertex in the east is our destination. Cold, windy, raw landscapes are characteristic of this mountainous, breathtaking, pristine place. It's a living paradise where large concentrations of animals amaze all who visit.

South Georgia has an interesting historical heritage. It is a whale sanctuary and a cemetery. On the island, one can find the grave of one of the most famous explorers in history, Sir Ernest Shackleton, an undisputed symbol of leadership and courage.

The territorial affiliation of the island is under diplomatic dispute. It's currently under the jurisdiction of the United Kingdom, but Argentina is questioning the claim. This conflict even led to war in 1982.

South Georgia is a very remote place. From Europe, one must travel to Buenos Aires in Argentina, then fly further south to get a ship and finally cruise to the island. It took a really long time and a lot of money to get here.

There is no tourism infrastructure on the island. All activity is done from a liveaboard boat with catering done on the deck. Due to rapidly changing weather conditions, there

South Georgia amazing underwater kelp forests, often patrolled by leopard seals

Fur seal (left) defending its rock, very curious and active, moving around all the time; King penguin pair (above) and seals on beach; Female elephant seal (right) swimming in one of the South Georgia bays

is no guarantee of success on any expedition. Getting to land requires a Zodiac boat, and operating it on the rough seas in the area may be very dangerous, often impossible. Despite the challenges, there are many operators offering this destination in their portfolio.

Ghosts of the past

South Georgia holds inglorious reminders of the extensive sealing and whaling activities in the region of the past. There are numerous remains of whaling stations and whaling boats laying around, with no access, due to safety. They make a very strong impression when seen from the liveaboard.

One of these sites, called Grytviken, was cleaned and made available for visitors. Tourists can walk around and get a feeling of how the whaling process

worked, what type of equipment was used and actually how brutal the process was. Several whales skeletons may be seen laying about as well. All those frightening artifacts bring about real emotion and deep reflection among visitors.

Today, South Georgia is the location of two research stations working on conservation and protection of the unique ecology of this region.

An established museum also plays an important role in preserving the historical heritage of this place, especially its sinister whaling activities of the past. It is seen as symbol of what people should never repeat. A lot of unique exhibits may be seen at the museum such as everyday objects that belonged to whaling station workers, equipment used at the time, tools, etc. There is also a section exhibiting the flora and fauna of South Georgia.

In addition, there is a very specific room dedicated to Sir Ernest Shackleton and his spectacular achievements.

Sir Ernest Shackleton

Hailing from Ireland, Shackleton was an early 20th century polar explorer whose ambition was to make the first crossing of Antarctica from the Weddell Sea via the South Pole to the Ross Sea. He did not manage it, but he still became one of the most famous explorers of his time, thanks to everything that happened during his expedition in 1914-17.

Shackleton reached Antarctica with his crew, but his ship, *Endurance*, became trapped in pack ice in the Weddell Sea and eventually sank. Having lost the ship, the captain and crew decided to travel north over the ice to Elephant Island in the South Shetland Islands, where they

spent the following days relying only upon themselves. They had some equipment they saved from the ship. They slept in tents, ate seals and penguins and waited for rescue in an extremely difficult and demanding environment.

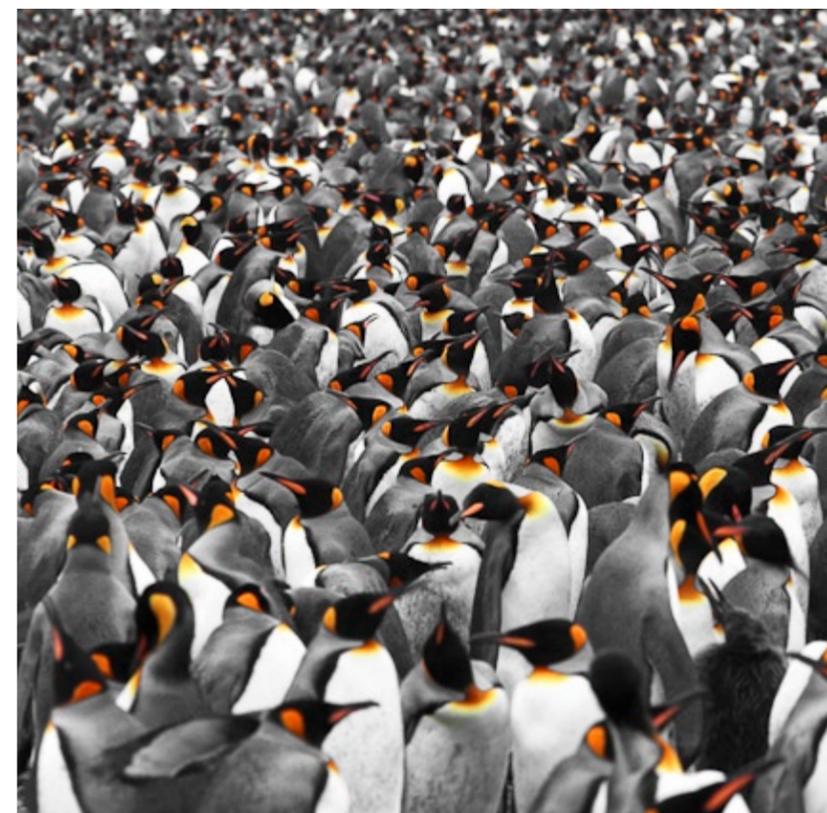

Unfortunately, nobody knew about

their situation, which concerned the captain a great deal. When the weather got better, Shackleton decided to sail in a small wooden lifeboat, saved from the *Endurance*, to South Georgia and alert the world to the crew's desperate situation.

Unique Dive

Colourful heads in harmony—King penguins strolling the beach. Images are usually taken *en-face*, because when we look at them, they look at us; for me, it was really difficult to capture them from the back. A nearly endless colony of King penguins (left). South Georgia is famous for the largest King penguin colony in the world, around 300,000 in one place. Fascinating forest of heads despite disgusting smell

concentration of King penguins, making this place uniquely interesting for scientists and tourists. On the island, there are around 600,000 King penguins in total. The largest colony contains about 300,000 individuals. It is an amazing feeling watching this endless, smelly and

The captain was a really brave man. The plan to cross the distance of 1,300km in open ocean on extremely rough seas in such a tiny boat after an exhaustive time spent on the ice seemed insane, but he was really determined to save his crew.

When looking at a map, South Georgia is a tiny spot in a huge area of ocean. It was amazing that without computers, just simple navigational tools, Shackleton was able to find his way over the ocean to land on the island of South Georgia. His extensive experience and understanding of the currents paid off.

We can only imagine what could have happened if he had passed South Georgia and missed it. But this was not the end of the story. Shackleton reached the island landing on the far side. To get to the whaling station, he had to cross the mountains.

Today, it is known all over the world that Shackleton's spectacular navigational efforts ended with his successful cross-

ing of the island and alerting the world of his stranded crew. His outstanding courage and leadership was rewarded. After 18 months of an unbelievable fight for life in the Antarctic, the crew was saved. Shackleton returned home a hero.

Unfortunately, during his next expedition, he died, and his remains were buried on South Georgia. His grave is one of the main memorial attractions to this day.

Diving

Scuba diving is limited on South Georgia. Most of the significant attractions here are on land. Despite this, it was worth getting wet to experience this beautiful place underwater as well. Diving was mostly about watching aquatic mammals playing around, everywhere, from small bottom dwelling creatures to amazing underwater kelp forests patrolled by leopard seals.

South Georgia is really full of life; sometimes it is difficult to cross over a beach due

to the number of seals resting there. Once, when watching seals playing, somebody said to me: "If I were a seal in my next life, I would like to live in South Georgia." The sentiment described very well the friendly atmosphere here, untouched by human beings, raw and really free.

Penguins

South Georgia hosts the world's largest

noisy family.

King penguins are beautiful birds when they reach adulthood. This may be a kind of compensation for childhood, because they are awfully ugly as chicks. I am not a biologist researching King penguins, but I made some intriguing observations about their lives.

On first sight, such a large colony looked like a monolith, but when I watched a bit

Unique Dive

Fur Seal on the rock (above). This image was taken in washing machine conditions—very rough, strong waves, dark weather, cloud covered mountains and hundreds of fur seals jumping, playing, fighting and swimming like missiles. The purpose of this shot was to capture one seal separate from the colony, a break in the never ending action, expressing at the same time the very specific feeling and raw atmosphere of the South Georgia landscape. Portrait of King penguin in early morning shower (far left)

Based in Poland, Bartosz Stróżyński is a nature and underwater photographer, composer, lyricist, author of music videos and multimedia projects, graphic artist and sculptor with several international photo competition awards including the International Photography Awards, European Wildlife Photographer of the Year, International Nature Photo Competition Asferico and the Great Photographic Competition of National Geographic. He has participated in many photographic expeditions including the Elysium Epic Shackleton's Antarctic Visual Epic Project. For more information, visit: www.fimufo.com

hand. It is a memorial of spectacular courage and, at the same time, it has been caught in political and armed conflict.

Yet, the royalty of South Georgia is unquestioned. With 600,000 King penguins on just 3,600 square kilometers of land, living together in harmony among themselves and other species, is it not possible for us to learn to exist this way in a 21st century world? Yes, we can hope that it may be a bit inspiring to us all. ■

leaders, followers, shy ones, brave ones, extraverted, introverted, etc. It amazed me, how they could live together in one place, in a limited space, and manage it well. It was incredible.

King penguins are very faithful and loyal. They normally have only one partner their whole life. As with all penguins, they feed on fish and krill. When in the water, they transform from funny, swaggering, proud animals into sleek, underwater missiles. We watched groups of penguins walking along the beaches and, time after time, jump into the water to hunt and feed. This crowded seaside looked like Copacabana—a beautiful, busy and playful place.

Seals

Seals can be found in many places on the planet, but probably nowhere with such huge concentrations as on South Georgia. Fur seals, elephant seals and Weddell seals were everywhere. If we

consider that humans decimated their populations over the centuries by extensive hunting, the restoration of the species seems to have come quite quickly.

Diversity

The richness of life on South Georgia is not a miracle. There's a reason for it. The currents flowing from Antarctica mix around the island and bring a rich river of krill to South Georgia, which feeds most of the animals living here. It explains the wildlife phenomenon of this place. But year after year, there is more and more concern about fluctuations in krill populations, the reasons for these fluctuations, and their impact on the environment in the future.

South Georgia has many faces and inspires extreme emotions. It is a beautiful, incredible dream of freedom and life on the one hand, and a frightening reminder of the brutality of the sealing and whaling of the past, on the other

longer, a continuous interaction among penguins could be observed, including very aggressive attacks on each other. It was similar to what people do. I saw
